

Safer Return-to-Work and Business Continuity solutions from Advanced UK

The Office Printer Dilemma

When your revenues are committed to idle office infrastructure, it's time to seek solutions. It's the perfect time to cut those costs, whether it's by reducing the fleet or halving the cost per page.

With PaperCut software, you take back control. We'll configure it – remotely – and you'll see how to help your remote workers, print less, and waste less ... and then we'll show you how to exit those print contracts designed for a pre-COVID-19 workplace.

STOP UNNECESSARY EXPENDITURE

Now is the time to consider the monthly overhead of your multiple office printers. With minimum contracted print volumes, and under-utilised service level agreements, wrapped up in unfair contracts, they're not helping you!

We've got the solution: our software will report every device usage and cost. Now what if we could cut those costs by up to 40%? Take control of print.

Use the power of print management to shrink your environmental footprint and bills, while delivering print the way you operate

Easy, Secure, Waste-free Printing

PaperCut fits with your print environment to support mobile and BYOD printing, automated print queues, and convenient and secure print release. It's used by many 1,000's of businesses around the world precisely to save money.

Benefits at a glance

- ✓ Implement print policies to force users to print responsibly (such as in greyscale or duplex).
- ✓ Stop wastage, with secure print release (12% of print jobs go directly to the recycling bin).
- ✓ Get full reporting, from how many trees you've consumed, to which printers are idle, broken, or simply costing you a small fortune.
- ✓ Enable visitor, guest, BYOD and mobile printing – perfect for staff working from home. All enabled without any printer drivers!
- ✓ Supports almost every printer, from humble desktops to the largest MFDs with touch-screen controls.
- ✓ Find-Me Printing delivers support for global print queues: With this setup, end-users print to a single central global queue and then release their print job at any device. The print job "follows" you to the printer. The central queue is referred to as a global or virtual queue. That's tailor-made for the remote worker!

For any brand of printer, anywhere

Businesses save up to 20% by implementing just the secure print release and find-me printing functionality.

Mix in print policies to encourage duplex, or your own rules, and you'll soon not only be saving paper but also making users more productive and doing less admin work!

The final part of the puzzle is how Advanced UK will then take your print reports and show you exactly how and where the additional saving might be realised.
